

Circuit Breaker Events

Circuit Breaker Events

Event Type	When It Triggers	Webhook Field
<code>BreakerTripped</code>	When breaker moves from Closed → Open due to failure threshold	<code>CircuitEvent = 0</code>
<code>BreakerReset</code>	When breaker moves from Open → Closed , either: • After cooldown • Or via half-open probe success	<code>CircuitEvent = 1</code>
<code>BreakerTriggered</code>	Generic event on any state change (tripped or reset)	Use <code>Status</code> field

Use Cases

- Integrate with alerting systems (e.g., Slack, PagerDuty, Opsgenie)
- Log circuit state changes for diagnostics and uptime audits
- Automate fallback behavior in other services
