

Advanced gRPC Proxying Concepts

Secure and Insecure gRPC Proxy

Secure gRPC Proxy

TLS with gRPC

- Attach a certificate to the API in Tyk
- gRPC service will then be available via HTTPS

Insecure gRPC Proxy (h2c)

h2c (HTTP/2 Cleartext)

- Useful for service-to-service traffic
- Set target_url to h2c://my-grpc-service
- No TLS required

Streaming Support in gRPC

Tyk supports:

- Client Streaming
- Server Streaming
- Bidirectional Streaming

Set `flush_interval = 1 (ms)` in `tyk.conf`:

```
"http_server_options": {  
  "flush_interval": 1  
}
```
