

Authentication with gRPC

Authentication for gRPC APIs in Tyk

- **Mutual TLS (mTLS)**
 - Two-way certificate validation
 - Ideal for secure internal communication
 - Configure using standard Tyk Mutual TLS settings
- **Basic Authentication**
 - Uses username and password encoded in base64
 - Sent in the `Authorization` header
 - Example: `Authorization: Basic base64(username:password)`
- **Token-Based Authentication**
 - Sends a bearer token in the `Authorization` header
 - Example: `Authorization: Bearer your-token`
 - Works seamlessly with Tyk's policies and API key system
