

Overview – Using Tyk as a TCP Proxy

Overview – Using Tyk as a TCP Proxy

- Tyk can act as a reverse proxy for TCP services.
- Enables management of non-HTTP applications (e.g., databases, custom protocols).
- Configure via:
 - API definitions (JSON)
 - Tyk Dashboard UI

Basic TCP API Definition

```
{  
  "listen_port": 30001,  
  "protocol": "tls",  
  "certificate": ["<cert-id>"],  
  "proxy": {  
    "target_url": "tls://upstream:9191"  
  }  
}
```

- `protocol`: "tcp" or "tls"
- `target_url`: must start with `tcp://` or `tls://`
- For TLS, attach certificates by ID or path
