

Advanced Configurations

Multiplexing & Proxy Protocol

- Supports SNI-based multiplexing (multiple services on one port)
- Services must share the same protocol (e.g., TLS)
- Support for PROXY protocol (e.g., when behind another proxy)

```
"enable_proxy_protocol": true
```

Port Whitelisting

Custom ports must be explicitly allowed

```
"ports_whitelist": {  
  "https": {  
    "ranges": [{ "from": 8000, "to": 9000 }]  
  },  
  "tls": {  
    "ports": [6000, 6015]  
  }  
}
```

To allow any port:

```
"disable_ports_whitelist": true
```

Health Checks

TCP Health Checks – Simple

```
"uptime_tests": {  
  "check_list": [  
    { "url": "127.0.0.1:6379", "commands": [] }  
  ]  
}
```

- Just checks if a port is open

Advanced Health Checks – Redis Sentinel

```
"commands": [  
  { "name": "send", "message": "PING\r\n" },  
  { "name": "expect", "message": "+PONG" },  
  { "name": "send", "message": "info replication\r\n" },  
  { "name": "expect", "message": "role:master" }  
]
```

- Directs traffic only to Redis master
- Ensures failover resiliency
