

Traffic Routing

Traffic Routing is how Tyk directs API requests to the right backend, while applying security and tracking along the way.

Traffic Routing: Example

API Client

API Gateway

API Server

Requested URL

```
http://my-domain.com/my-api/endpoint-1
```

API Definition

```
{
  "domain": "my-domain.com",
  "proxy": {
    "target_url": "http://my-api-server.com/",
    "listen_path": "/my-api",
    "strip_listen_path": true
  }
}
```

Target URL

```
http://my-api-server.com/endpoint-1
```
