

Tyk Product Components: Pump

Exploring the role of each component in the Tyk Ecosystem

Tyk Pump Overview

- Extracts analytics from Tyk Gateway via Redis
 - Reads request/response logs, latencies, errors, etc.
- Exports to external databases
 - PostgreSQL, MongoDB, Prometheus, ElasticSearch, InfluxDB, and more
- Enables rich analytics and dashboards
 - View API usage and visualizations on the Tyk Dashboard
 - Visualize API usage with tools like Grafana or Kibana
- Runs as a lightweight background service
 - Doesn't slow down the Gateway
- Flexible & pluggable
 - Choose one or multiple outputs

Tyk Pump: Default Data Sink

Tyk Pump: Third party Data Sink
